## Important notice

Dear Customer,
On 7 February 2017 the former NXP Standard Product business became a new company with the tradename Nexperia. Nexperia is an industry leading supplier of Discrete, Logic and PowerMOS semiconductors with its focus on the automotive, industrial, computing, consumer and wearable application markets

In data sheets and application notes which still contain NXP or Philips Semiconductors references, use the references to Nexperia, as shown below.

Instead of http://www.nxp.com, http://www.philips.com/ or http://www.semiconductors.philips.com/, use http://www.nexperia.com

Instead of sales.addresses@www.nxp.com or sales.addresses@www.semiconductors.philips.com, use salesaddresses@nexperia.com (email)

Replace the copyright notice at the bottom of each page or elsewhere in the document, depending on the version, as shown below:

- © NXP N.V. (year). All rights reserved or © Koninklijke Philips Electronics N.V. (year). All rights reserved
Should be replaced with:
- © Nexperia B.V. (year). All rights reserved.

If you have any questions related to the data sheet, please contact our nearest sales office via e-mail or telephone (details via salesaddresses@nexperia.com). Thank you for your cooperation and understanding,

Kind regards,
Team Nexperia

74F112
Dual J-K negative edge-triggered flip-flop

IC15 Data Handbook

## FEATURE

- Industrial temperature range available $\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+85^{\circ} \mathrm{C}\right)$

## DESCRIPTION

The 74F112, Dual Negative Edge-Triggered JK-Type Flip-Flop, feature individual J, K, Clock (CPn), Set (SD) and Reset (RD) inputs, true (Qn) and complementary ( $\overline{\mathrm{Q}}$ ) outputs.

The SD and RD inputs, when Low, set or reset the outputs as shown in the Function Table, regardless of the level at the other inputs.
A High level on the clock ( $\overline{C P n}$ ) input enables the $J$ and $K$ inputs and data will be accepted. The logic levels at the J and K inputs may be allowed to change while the CPn is High and flip-flop will perform according to the Function Table as long as minimum setup and hold times are observed. Output changes are initiated by the High-to-Low transition of the CPn.

## PIN CONFIGURATION

| TYPE | TYPICAL PROPAGATION DELAY | TYPICAL SUPPLY CURRENT (TOTAL) |
| :---: | :---: | :---: |
| 74 F 112 | 100 MHz | 15 mA |

## ORDERING INFORMATION

| DESCRIPTION | ORDER CODE |  | PKG DWG \# |
| :---: | :---: | :---: | :---: |
|  | COMMERCIAL RANGE $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V} \pm 10 \%, \mathrm{~T}_{\mathrm{amb}}=0^{\circ} \mathrm{C} \text { to }+70^{\circ} \mathrm{C}$ | INDUSTRIAL RANGE $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V} \pm 10 \%, \mathrm{~T}_{\mathrm{amb}}=-40^{\circ} \mathrm{C} \text { to }+85^{\circ} \mathrm{C}$ |  |
| 16-pin plastic DIP | N74F112N | 174F112N | SOT38-4 |
| 16-pin plastic SO | N74F112D | 174F112D | SOT109-1 |

## INPUT AND OUTPUT LOADING AND FAN-OUT TABLE

| PINS | DESCRIPTION | 74F (U.L.) HIGH/LOW | LOAD VALUE HIGH/LOW |
| :---: | :--- | :---: | :---: |
| J0, J1 | J inputs | $1.0 / 1.0$ | $20 \mu \mathrm{~A} / 0.6 \mathrm{~mA}$ |
| K0, K1 | K inputs | $1.0 / 1.0$ | $20 \mu \mathrm{~A} / 0.6 \mathrm{~mA}$ |
| SD0, SD1 | Set inputs (active Low) | $1.0 / 5.0$ | $20 \mu \mathrm{~A} / 3.0 \mathrm{~mA}$ |
| RD0, $\bar{R} D 1$ | Reset inputs (active Low) | $1.0 / 5.0$ | $20 \mu \mathrm{~A} / 3.0 \mathrm{~mA}$ |
| CP0, CP1 | Clock Pulse input (active falling edge) | $1.0 / 4.0$ | $20 \mu \mathrm{~A} / 2.4 \mathrm{~mA}$ |
| Q0, $\overline{\text { Q } 0 ; ~ Q 1, ~} \overline{\text { Q1 }}$ | Data outputs | $50 / 33$ | $1.0 \mathrm{~mA} / 20 \mathrm{~mA}$ |

## NOTE:

One (1.0) FAST unit load is defined as: $20 \mu \mathrm{~A}$ in the High state and 0.6 mA in the Low state.

LOGIC SYMBOL

IEC/IEEE SYMBOL

## LOGIC DIAGRAM

FUNCTION TABLE

| INPUTS |  |  |  |  | OUTPUTS |  | OPERATING MODE |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| $\mathrm{I}_{\mathrm{CC}}$ | Supply current (total) ${ }^{4}$ |  | $V_{C C}=M A X$ |  |  | 15 | 21 | mA |  |

## NOTES:

1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
2. All typical values are at $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V}, \mathrm{~T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$.
3. Not more than one output should be shorted at a time. For testing los, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, los tests should be performed last.
4. Measure $\mathrm{I}_{\mathrm{CC}}$ with the clock input grounded and all outputs open, with the Q and $\overline{\mathrm{Q}}$ outputs High in turn.

## AC WAVEFORMS

For all waveforms, $\mathrm{V}_{\mathrm{M}}=1.5 \mathrm{~V}$.

The shaded areas indicate when the input is permitted to change for predictable output performance.
Waveform 1. Propagation Delay for Data to Output, Data Setup Time and Hold Times, and Clock Pulse Width

Waveform 2. Propagation Delay for Set to Output, Set Pulse Width, and Recovery Time for Set to Clock

Waveform 3. Propagation Delay for Reset to Output, Reset Pulse Width, and Recovery Time for Reset to Clock

## TEST CIRCUIT AND WAVEFORMS

Test Circuit for Totem-Pole Outputs

## DEFINITIONS:

$R_{L}=$ Load resistor; see AC ELECTRICAL CHARACTERISTICS for value.
$C_{L}=$ Load capacitance includes jig and probe capacitance; see AC ELECTRICAL CHARACTERISTICS for value.
$R_{T}=$ Termination resistance should be equal to $Z_{\text {OUT }}$ of pulse generators.

## Input Pulse Definition

## Definitions

Short-form specification - The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.
Limiting values definition - Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.
Application information - Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## Disclaimers

Life support - These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.
Right to make changes - Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
