1-of-4 decoder/demultiplexer 74F139

FEATURES

- Demultiplexing capability
- Two independent 1-of-4 decoders
- Multifunction capability

DESCRIPTION

The 74F139 is a high speed, dual 1-of-4 decoder/demultiplexer. This device has two independent decoders, each accepting two binary weighted inputs (A0n, A1n) and providing four mutually exclusive active-Low outputs ($\overline{Q}$0n–$\overline{Q}$3n). Each decoder has an active-Low Enable ($\overline{E}$). When $\overline{E}$ is High, every output is forced High. The Enable can be used as the Data input for a 1-of-4 demultiplexer application.

I_{IH}	High-level input current	V_{CC} = MAX, V_I = 2.7V				20	µA
I_{ILL}	Low-level input current	V_{CC} = MAX, V_I = 0.5V				–0.6	mA
I_{OS}	Short-circuit output current[3]	V_{CC} = MAX		–60		–150	mA
I_{CC}	Supply current (total)	V_{CC} = MAX			13	20	mA

NOTES:

1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
2. All typical values are at V_{CC} = 5V, T_{amb} = 25°C.
3. Not more than one output should be shorted at a time. For testing I_{OS}, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, I_{OS} tests should be performed last.
