1. General description

The 74HC123; 74HCT123 are high-speed Si-gate CMOS devices and are pin compatible with Low-power Schottky TTL (LSTTL). They are specified in compliance with JEDEC standard no. 7A.

The 74HC123; 74HCT123 are dual retriggerable monostable multivibrators with output pulse width control by three methods:

1. The basic pulse is programmed by selection of an external resistor ($R_{\text{EXT}}$) and capacitor ($C_{\text{EXT}}$).
2. Once triggered, the basic output pulse width may be extended by retriggering the gated active LOW-going edge input (nA) or the active HIGH-going edge input (nB). By repeating this process, the output pulse period (nQ = HIGH, nQ = LOW) can be made as long as desired. Alternatively an output delay can be terminated at any time by a LOW-going edge on input nRD, which also inhibits the triggering.
3. An internal connection from nRD to the input gates makes it possible to trigger the circuit by a HIGH-going signal at input nRD as shown in Table 3.

Schmitt-trigger action in the nA and nB inputs, makes the circuit highly tolerant to slower input rise and fall times.

The 74HC123; 74HCT123 are identical to the 74HC423; 74HCT423 but can be triggered via the reset input.

2. Features and benefits

- DC triggered from active HIGH or active LOW inputs
- Retriggerable for very long pulses up to 100 % duty factor
- Direct reset terminates output pulse
- Schmitt-trigger action on all inputs except for the reset input
- ESD protection:
  - HBM JESD22-A114F exceeds 2000 V
  - MM JESD22-A115-A exceeds 200 V
- Specified from −40 °C to +85 °C and from −40 °C to +125 °C

<tr>
<td>↑</td>
<td>L</td>
</tr>
</tbody>
</table>

[1] H = HIGH voltage level; L = LOW voltage level; X = don’t care; ↑ = LOW-to-HIGH transition; ↓ = HIGH-to-LOW transition; ∫ = one HIGH level output pulse; ↘ = one LOW level output pulse.

[2] If the monostable was triggered before this condition was established, the pulse will continue as programmed.

7. Limiting values

Table 4. Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134). Voltages are referenced to GND (ground = 0 V).

</tbody>
</table>

[1] $t_{pd}$ is the same as $t_{PHL}$ and $t_{PLH}$; $t_i$ is the same as $t_{THL}$ and $t_{TLH}$

[2] For other $R_{EXT}$ and $C_{EXT}$ combinations see Figure 7. If $C_{EXT} > 10 \text{ nF}$, the next formula is valid.

$$t_W = K \times R_{EXT} \times C_{EXT},$$

where:

- $t_W$ = typical output pulse width in ns;
- $R_{EXT}$ = external resistor in $\text{k}\Omega$;
- $C_{EXT}$ = external capacitor in $\text{pF}$;
- $K$ = constant = 0.45 for $V_{CC} = 5.0 \text{ V}$ and 0.55 for $V_{CC} = 2.0 \text{ V}$.

The inherent test jig and pin capacitance at pins 15 and 7 (nREXT/CEXT) is approximately 7 $\text{pF}$.

[3] The time to retrigger the monostable multivibrator depends on the values of $R_{EXT}$ and $C_{EXT}$. The output pulse width will only be extended when the time between the active-going edges of the trigger input pulses meets the minimum retrigger time. If $C_{EXT} > 10 \text{ pF}$, the next formula (at $V_{CC} = 5.0 \text{ V}$) for the setup time of a retrigger pulse is valid.

$$t_{\text{trig}} = 30 + 0.19 \times R_{EXT} \times C_{EXT}^{0.9} + 13 \times R_{EXT}^{1.05},$$

where:

- $t_{\text{trig}}$ = retrigger time in ns;
- $C_{EXT}$ = external capacitor in $\text{pF}$;
- $R_{EXT}$ = external resistor in $\text{k}\Omega$.

The inherent test jig and pin capacitance at pins 15 and 7 (nREXT/CEXT) is 7 $\text{pF}$.

[4] When the device is powered-up, initiate the device via a reset pulse, when $C_{EXT} < 50 \text{ pF}$.

[5] $C_{PD}$ is used to determine the dynamic power dissipation ($P_D$ in $\mu\text{W}$).

$$P_D = C_{PD} \times V_{CC}^2 \times f_o + \sum(f_i \times C_L \times V_{CC}^2 \times f_o) + 0.75 \times C_{EXT} \times V_{CC}^2 \times f_o + D \times 16 \times V_{CC}$$

where:

- $f_i$ = input frequency in $\text{MHz}$;
- $f_o$ = output frequency in $\text{MHz}$;
- $D$ = duty factor in $\%$;
- $C_L$ = output load capacitance in $\text{pF}$;
- $V_{CC}$ = supply voltage in $\text{V}$;
- $C_{EXT}$ = timing capacitance in $\text{pF}$;
- $\sum(f_i \times C_L \times V_{CC}^2 \times f_o)$ sum of outputs.

12. Application information

12.1 Timing component connections

The basic output pulse width is essentially determined by the values of the external timing components \( R_{\text{EXT}} \) and \( C_{\text{EXT}} \).

![Timing component connections diagram](image)

(1) For minimum noise generation it is recommended to ground pins 6 (2\(C_{\text{EXT}}\)) and 14 (1\(C_{\text{EXT}}\)) externally to pin 8 (GND).

Fig 13. Timing component connections

12.2 Power-up considerations

When the monostable is powered-up it may produce an output pulse, with a pulse width defined by the values of \( R_{\text{EXT}} \) and \( C_{\text{EXT}} \). This output pulse can be eliminated using the circuit shown in Figure 14.

![Power-up output pulse elimination circuit diagram](image)

Fig 14. Power-up output pulse elimination circuit
12.3 Power-down considerations

A large capacitor $C_{EXT}$ may cause problems when powering-down the monostable due to the energy stored in this capacitor. When a system containing this device is powered-down or a rapid decrease of $V_{CC}$ to zero occurs, the monostable may sustain damage, due to the capacitor discharging through the input protection diodes. To avoid this possibility, use a damping diode ($D_{EXT}$) preferably a germanium or Schottky type diode able to withstand large current surges and connect as shown in Figure 15.

Fig 15. Power-down protection circuit

[2] The term ‘short data sheet’ is explained in section “Definitions”.
[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL http://www.nexperia.com.

16.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. Nexperia does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local Nexperia sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between Nexperia and its customer, unless Nexperia and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the Nexperia product is deemed to offer functions and qualities beyond those described in the Product data sheet.

16.3 Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, Nexperia does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

In no event shall Nexperia be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, Nexperia's aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the Terms and conditions of commercial sale of Nexperia.

Right to make changes — Nexperia reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — Nexperia products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of a Nexperia product can reasonably be expected to result in personal injury, death or severe property or environmental damage. Nexperia and its suppliers accept no liability for inclusion and/or use of Nexperia products in such equipment or applications and therefore such inclusion and/or use is at the customer’s own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. Nexperia makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using Nexperia products, and Nexperia accepts no liability for any assistance with applications or customer product design. It is customer’s sole responsibility to determine whether the Nexperia product is suitable and fit for the customer’s applications and products planned, as well as for the planned application and use of customer’s third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

Nexperia does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer’s applications or products, or the application or use by customer’s third party customer(s). Customer is responsible for doing all necessary testing for the customer’s applications and products and Nexperia products in order to avoid a default of the applications and the products or of the application or use by customer’s third party customer(s). Nexperia does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — Nexperia products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nexperia.com/profile/terms, unless otherwise agreed in a validwritten individual agreement.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.
Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

Non-automotive qualified products — Unless this data sheet expressly states that this specific Nexperia product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. Nexperia accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without Nexperia’s warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond Nexperia’s specifications such use shall be solely at customer’s own risk, and (c) customer fully indemnifies Nexperia for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond Nexperia’s standard warranty and Nexperia’s product specifications.

Translations — A non-English (translated) version of a document is for reference only. The English version shall prevail in case of any discrepancy between the translated and English versions.
